

OASIS SAFETY SWING

Oasis safety swing is pleasant and safe to use thanks to its patented brake system. When you step on the floor the swing smoothly stops moving. When you step out or sit down into the swing it continues rocking and you can kick more speed to it. Structure is tough as it is made for public use; the frame is powder coated steel profile (grey RAL7024), seats are PEFC-certified thermo-treated wood and polycarbonate roof gives protection against rain and sun. The design is all inclusive and as an option you can choose aluminum wheel chair ramp. Oasis swing is installed free standing on flat ground. See the video how safety swing works here.
