

Lappset Solar in marine grade

The Lappset Solar colour scheme matches the product colour that it is powering. By default, Pebble grey RAL7032 is combined with Pale green RAL6021 or Pebble grey RAL7032 is combined with Azure blue RAL5009. In case of a custom product colour, the Solar post colour will be adjusted accordingly. The Lappset Solar is a specially designed Solar post that provides green energy for Lappset Interactive playsets. It eliminates the need for a mains power cable and offers a new way to power the equipment. Built to withstand harsh winters, it provides at least 2 hours of play per day. During winter months, the playground equipment can be put in Eco Mode to save energy. The Lappset Solar is connected to Lappset Dashboard, a control and support platform that allows remote monitoring of battery status and settings. Please note that the Lappset Solar solution is suitable for areas below 53-degree longitude. For accurate energy consumption calculations, it is recommended to consult with Lappset for specific project locations. Keep in mind that these calculations are
