

Kita litter bin is a truly garbage eater as it has aperture size almost the same as it's total width. The new designed top gives excellent cover against rain and snow as well as it prevents birds getting into the bin. Large aperture is of course user friendly but also maintenance is easy through openable (locked) front door. Maintenance working position is ergonomic, you see clearly and reach easily the inside of the bin and garbage lifting distance is short & kept low. The standard steel liner gives safety and tidiness as it protects from possible sharp objects and liquid leaks. Kita is made in two sizes, 60 and 100, and material is 2mm galvanized and powder coated steel. There is a wide range of optional fixing accessories to choose and an external tube ashtray can be installed on the hinge side of the bin. Design: Muodon vuoksi Oy Heikki Meriläinen.
