

This litter bin is a real classic, "the Helsinki litter bin", because of its beautifully timeless design, durable construction and user-friendliness. Maintenance is easy and fast through (locked) openable front door and working position is ergonomic; you see clearly and reach easily the inside of the bin and garbage lifting distance is short & kept low. The standard steel liner gives safety and tidiness as it protects from possible sharp objects and liquid leaks. Tight construction is also protective in case of fire. CT-litter bin is made in three sizes; 30, 60 and 100, and material is 2mm galvanized and powder coated or stainless steel plate. The 100-model is fixed through its bottom to optional free standing concrete base or underground metal base and the bin can be equipped with external tube ashtray and bird blocking plate on the aperture.
