

The Lappset Sona Interactive Arch is a 3.8-meter-high outdoor (and indoor-suitable) playset that combines motion-sensing technology with a vibrant play area. The sensor in the arch detects movement on the colorful Funky Floor, triggering interactive games and activities. Unlike pressure-based systems, the Sona relies on an overhead motion detector for precise interaction. Equipped with wireless internet, it allows for updates, monitoring, and customization through the Lappset Dashboard. Sona offers an engaging and dynamic experience for everyone.
