

Fono Interactive DJ-booth

The Lappset Fono Interactive DJ-booth is a DJ-booth designed specifically for use as outdoor public furniture (also suitable indoors). It features professional DJ functionalities, including scratch, filter, delay, pitch, flanger, crush, loop, and a crossfader. To make mixing music like a pro DJ more interesting, the Fono contains two wireless pads you can put your smartphone on (1 each) and play and mix music with both at the same time. With the option to mix from personal playlists, there are no external party fees. The Fono creates an engaging atmosphere, with people dancing, showcasing their moves, and socializing with friends. The music is not connected through Bluetooth to preserve the phone's battery life. The Fono can be pre-set to switch on and off at desired times and offers wireless internet connectivity for updates and customer settings via the online My Yalp platform.
